Running R from SAS

Dr. David Zeitler

Grand Valley State University

Setting up software

- I use a Mac with LaTeX and Office, and switch to Windows 8 for SAS 9.4 work.
    - You should have Windows with office installed.
- SAS (9.4 with SAS/IML preferred).
- R, either CRAN or MRAN (I have MRAN)
- RStudio
- Installed R packages: source('InstallPackages.R')

dplyr, ggplot2, car, mosaicData, lazyeval, MASS,

reshape2, readr, latticeExtra,

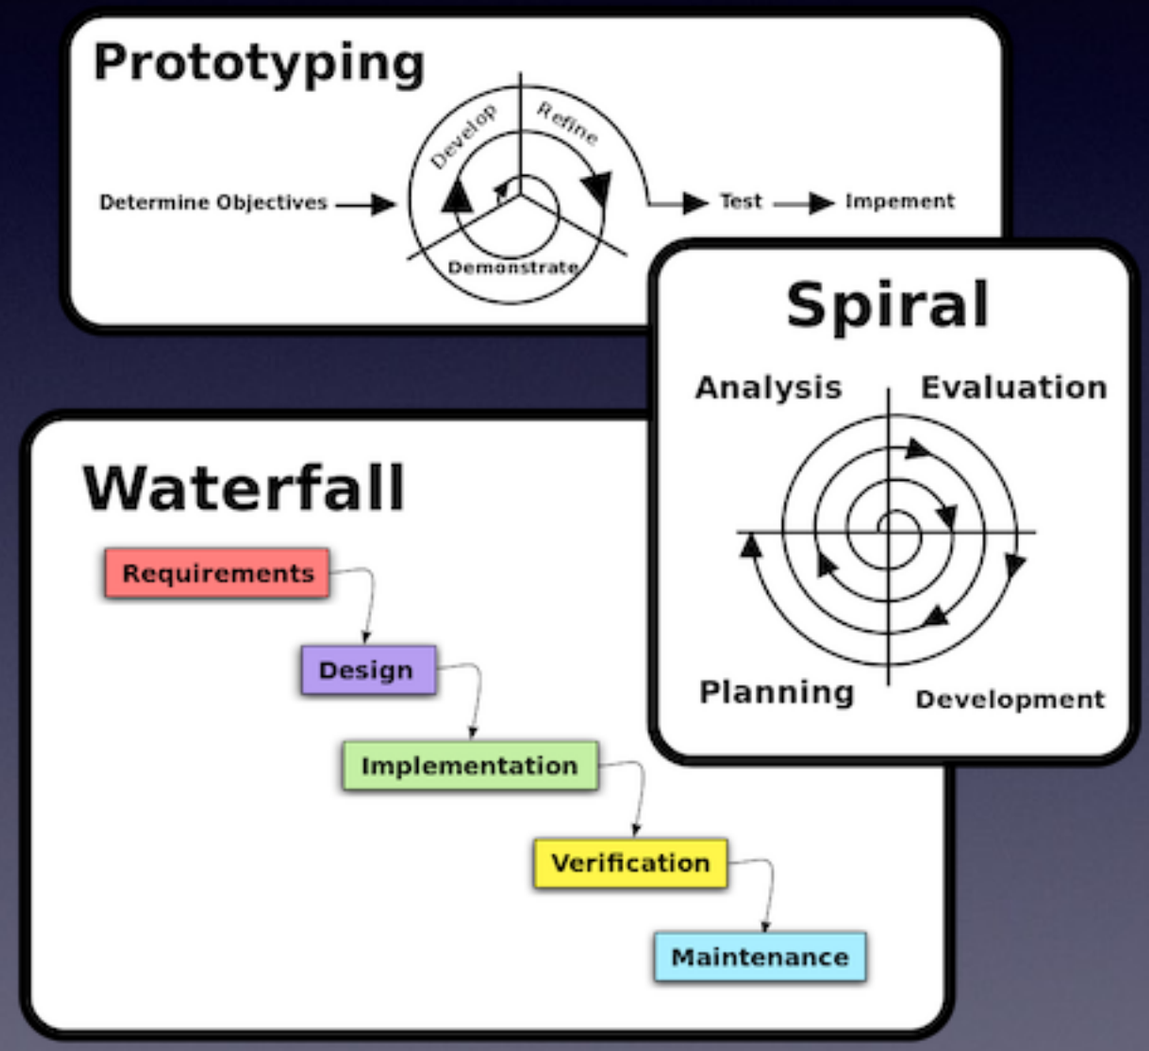
ggdendro, gridExtra, lubridate, fastR, magrittr, NHANES,

RCurl, sp, maptools, vcd, testthat, tidyr, knitr,

mapproj, rgl, manipulate, Rcmdr, RcmdrPlugin.EZR

Software Development

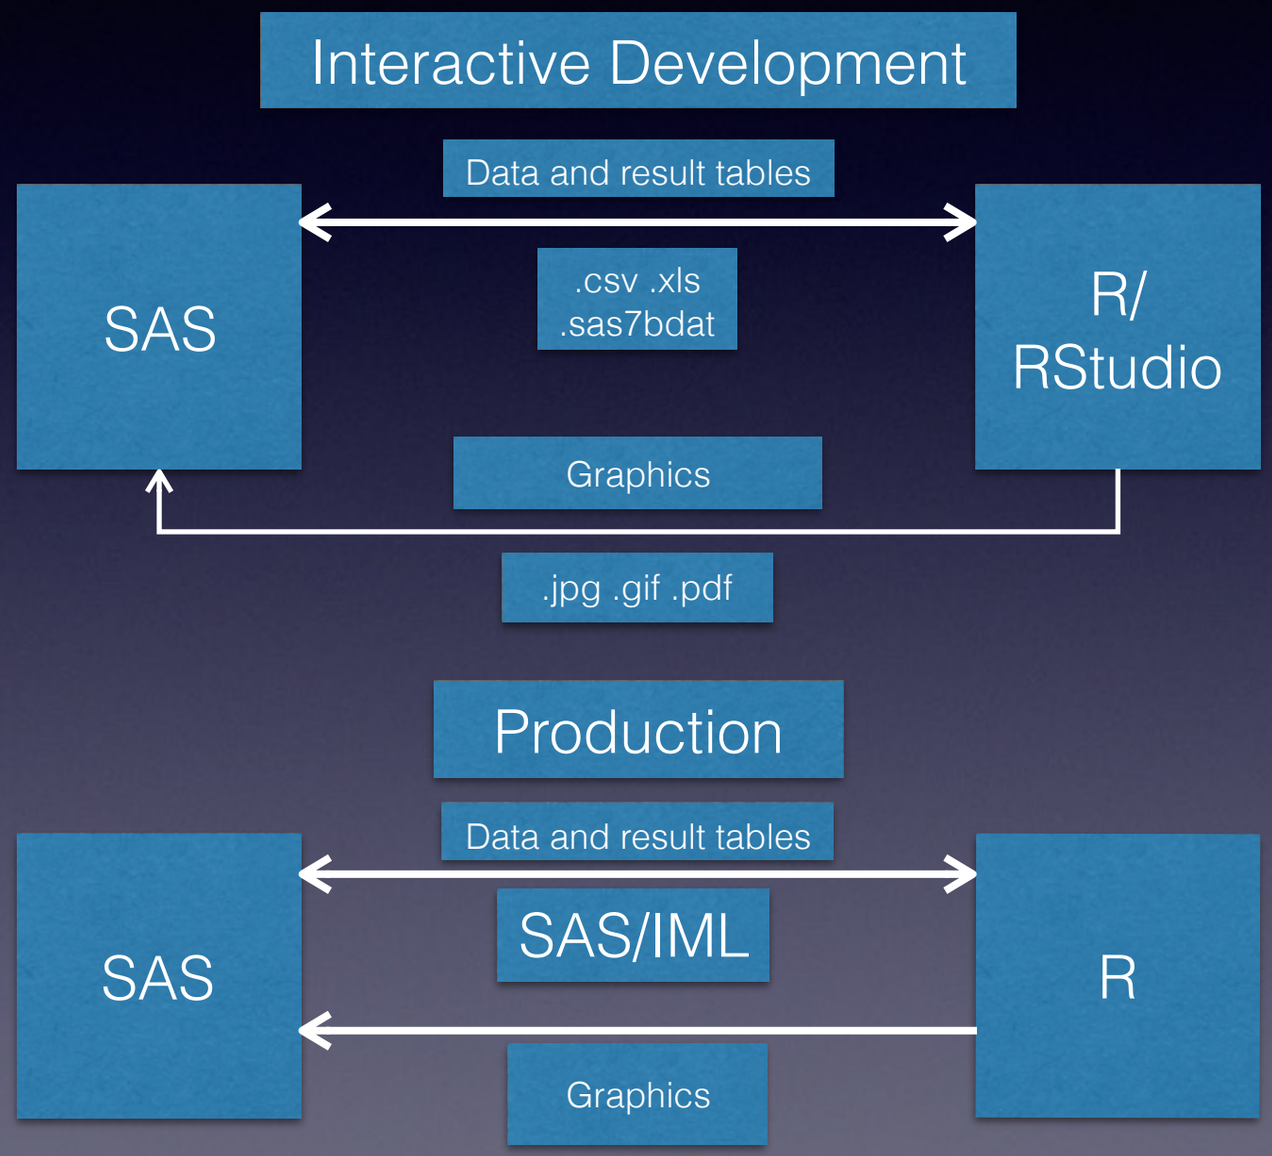
Developing code, whether SAS, R, Java, or any other is software development. The end result is code that produces something. For analysts, this is often a report. Regardless, software development is a process and can be viewed as sequential (waterfall) or iterative (spiral or prototyping).



Development vs Production

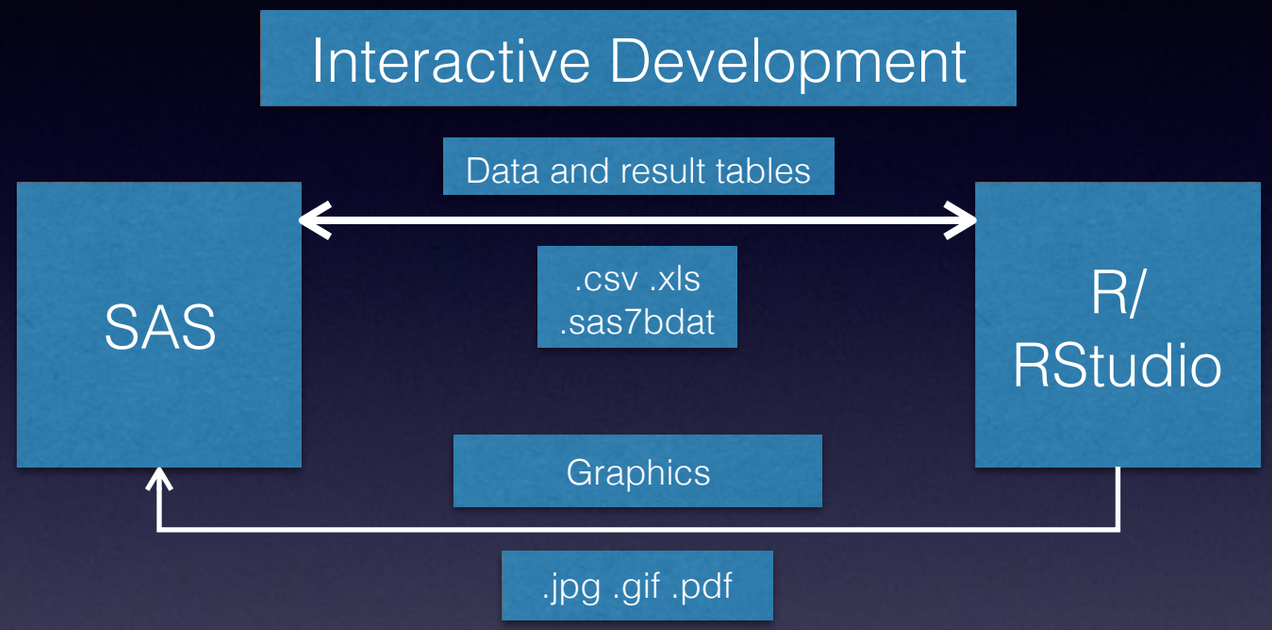
<u>Development</u> is done interactively, ending in a program for production.

<u>Production</u> runs without intervention.



Interactive development

- R work is done interactively
- Save SAS data to file and read into R
- Perform analysis in R writing result files for data tables and graphics images
- Read results back into SAS.



- Works with SAS 9.3
- Somewhat difficult to automate

Data import/export

- Write .csv file from SAS

```
ods csv body="c:\test.csv";
proc print data=sashelp.class;
run;
ods csv close;
```

- Read .csv file in SAS

```
proc import datafile="C:\temp\test.csv"
     out=shoes
     dbms=csv
     replace;
     getnames=no;
run;
```

- Read .sas7bdat into data frame in R

```
library(haven)
read_csv('c:\test.sas7bdat')
```

- Write dataframe to .csv in R

```
write.csv(test,file='c:\test.sas7bdat')
```

Using excel .xlsx files

- SAS read/write .xlsx files (http://www.ats.ucla.edu/stat/sas/faq/rwxls8.htm)

```
PROC IMPORT OUT= WORK.auto1 DATAFILE= "C:\auto.xlsx"
            DBMS=xlsx REPLACE;
     SHEET="auto";
     GETNAMES=YES;
RUN;
proc export data=mydata outfile='c:\dissertation\mydata.xlsx' dbms = xlsx
replace;
run;
```

- R read/write .xlsx files

```
library(xlsx)
# example of reading xlsx sheets
file <- system.file("tests", "test_import.xlsx", package = "xlsx")
res <- read.xlsx(file, 2) # read the second sheet
# example of writing xlsx sheets
file <- paste(tempfile(), "xlsx", sep=".")
write.xlsx(USArrests, file=file)
```

Graphics files

- Writing graphics from R.

```
# Using mosaic
png(‘mygraphic.png’)
boxplot(y~x,data=mydataframe)
device.off()
# With ggplot2
ggsave(‘mygraphic.png’)
```

- Including imported graphics in SAS ODS

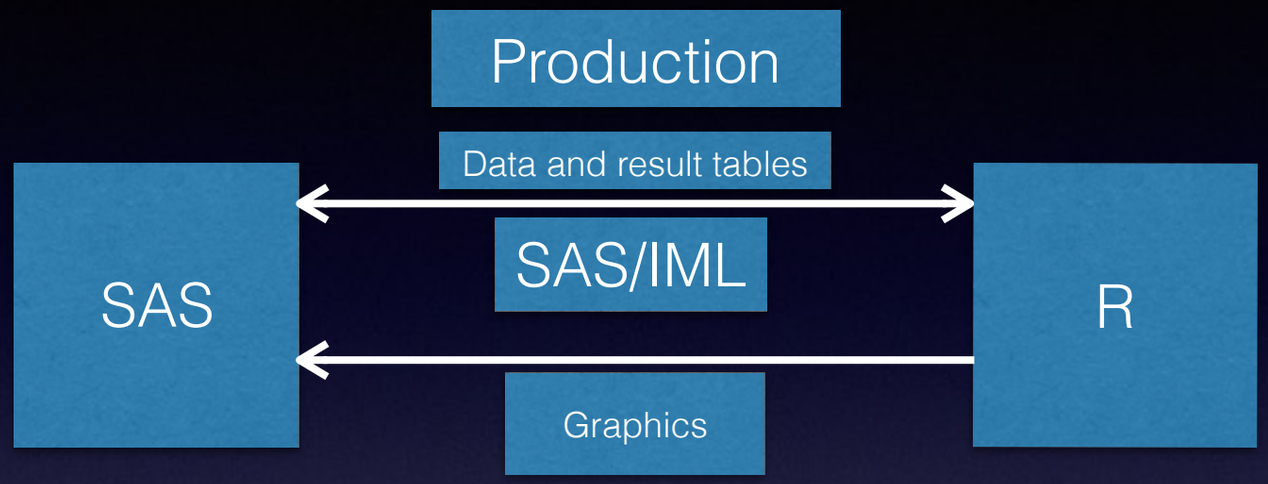
```
ods pdf file = "test.pdf" nogtitle nogfoot
 title = 'R graphic image';
ods escapechar='~';
ods text='~S={width=100% preimage="myplot.png"}';
ods pdf close;
```

- Note: SAS ODS output doesn’t appear to adhere well to standards.

Production - SAS 9.4 IML

Production runs without intervention, allowing automated report generation.

Make sure to add RLANG to your SASV9.CFG or -RLANG to your start icon properties. You'll need system privileges.



```
proc iml;

/* Comparison of matrix operations in IML and R */
print "----------  SAS/IML Results  ----------";
x = 1:3;
m = {1 2 3, 4 5 6, 7 8 9};
q = m * t(x);
print q;

/* vector of sequence 1,2,3 */
/* 3x3 matrix */
/* matrix multiplication */
 print "------------  R Results  ----------";
 submit / R;
   rx <- matrix( 1:3, nrow=1)            # vector of sequence 1,2,3
   rm <- matrix( 1:9, nrow=3, byrow=TRUE) # 3x3 matrix
   rq <- rm %*% t(rx)                    # matrix multiplication
   print(rq)
endsubmit;

run;
```

```
----------------------------------------------------------------------------
                                The SAS System

---------- SAS/IML Results ----------

                                    q
                                   14
                                   32
                                   50

------------ R Results ----------

     [,1]
[1,]   14
[2,]   32
[3,]   50
```

SAS/IML R communication

Transferring from a SAS Source to an R Destination

Method or Module	SAS Source	R Destination
ExportDataSetToR	SAS data set	R data frame
ExportMatrixToR	SAS/IML matrix	R matrix
DataObject.ExportToR	DataObject	R data frame

Transferring from an R Source to a SAS Destination

Method or Module	R Source	SAS Destination
DataObject.AddVarFromR	R expression	DataObject variable
DataObject.CreateFromR	R expression	DataObject
ImportDataSetFromR	R expression	SAS data set
ImportMatrixFromR	R expression	SAS/IML matrix

- Export data from SAS to R (ExportDataSetToR)
- Submit R code to create data objects
- Export any desired R graphics to image files. Use full file paths or they may get buried in temp folders.
- Import data from R to SAS (ImportDataSetFromR)
- Complete any desired analysis in SAS
- Use ODS to format output for reporting in to incorporate R graphics image files.
- Examples in R_IML.sas

Put it all together

```
proc iml;

/* Send the SAS help data set iris to R as SASIris */
run ExportDataSetToR("Sashelp.iris", "SASIris" );
submit / R;
        library(mosaic)
        str(SASIris);
        model <- lm(SepalLength ~ SepalWidth +
PetalLength, data=SASIris)
        summary(model)
        anova(model)
        SASIris.Diag <- fortify(model)
        SASIris.Diag %>%
                ggplot(aes(x=SepalWidth,y=.resid)) +
                geom_point() +
                ggtitle("Residuals by Sepal Width")
        ggsave("w:\\IrisResid.pdf")
endsubmit;

run ImportDataSetFromR("Work.SASIrisDiag","SASIris.Diag");

use Work.SASIrisDiag;
show contents;
close Work.SASIrisDiag;

proc sgplot
        data=Work.SASIrisDiag
        description="Iris model from R - diagnostics";
scatter
        x = SepalWidth
        y = _resid;
run;
```

```
'data.frame':   150 obs. of  5 variables:

What if you don't have IML?

- Save SAS datasets to disk (either csv or sas7bdat)
- Put R code into a separate file, call it <myuRcode.R>.
- Use Powershell Integrated Scripting Environment (ISE).
- Create a batch R file <myRcode.R>.
    - Develop the script interactively until you can source it in a clean session.
    - Use sink('Routput.txt') to save R output to a text file.
    - In <myRcode.R> write data sets to csv file to send to SAS
    - Save graphics to image format files
- Run the batch file from SAS code using the x command.
    - http://www2.sas.com/proceedings/sugi31/036-31.pdf
    - x "c:\'Program Files'\Microsoft\MRO\R-3.2.3\bin\R.exe CMD BATCH myRcode.R";
- Incorporate R output and graphics into SAS ODS.

R batch example

- myRcode.R

```
library(mosaic)
library(ggplot2)
library(dplyr)

model <- lm(SepalLength ~ SepalWidth + PetalLength,
                    data=SASIris)
summary(model)
anova(model)
SASIris.Diag <- fortify(model)
SASIris.Diag %>%
      ggplot(aes(x=SepalWidth,y=.resid)) +
      geom_point() +
      ggtitle("Residuals by Sepal Width")
ggsave("w:\\IrisResid.pdf")
```

- odsimage.sas

```
/* Set options for RTF output */
ods rtf file = "test.rtf" nogtitle nogfoot

    /* Titles and footnotes */
    title = 'R graphic image';

ods escapechar='~';

/* Import the image and output into the RTF */
ods text='~S={width=100% preimage="w:\
\IrisResid.png"}';
ods rtf close;

/* ---------------------- */
/* Set options for PDF output */
ods pdf file = "test.pdf" nogtitle nogfoot

    /* Titles and footnotes */
    title = 'R graphic image';

ods escapechar='~';

/* Import the image and output into the RTF */
ods text='~S={width=100% preimage="w:\
\irisresid.png"}';
ods pdf close;
```
